IMPORTANT INFORMATION

1 Indian Standard Time is kept at all stations.

2 All line clear stations are printed in heavy type while Flag stations and Passeneger Halts are in italics.

3 In the timings column, the upper figure denotes "arrival" and the lower figure denotes "departure". In case where only one figure is shown it indicates that the train is booked to run through.

4 Service stops are indicated specifically and are not open for public traffic booking. They are provided for crossing purpose and need not be observed if the crossing taken place else where.

5 PUNCTUALITY

Stations and running staff connected with the running of trains must realise that it is their duty to encourage and ensure punctuality of trains by every means within their power and every endeavour must be made particularly in the case of a train that is running late to make up time at stations and on the run subject to all speed restrictions.

The attention of Drivers should be drawn to the necessity of being on the alert and ready to start their trains immediately as soon as they receive the Guard's Signal after satisfying themselves that they have received the correct "Authority to Proceed". Driver should run the trains at maximum permissible speed of the section even when the train is running in time in order to save time for compensating subsequent time losses due to unforeseen detentions like signal failure, looping etc. subject to maximum permissible speed of the section and any Engg. or other special restrictions imposed from time to time.

All trains shall be run with the limits of maximum permissible speed of the section observing all permanent and temporary speed restriction of that section. While observing the maximum permissible speed (MPS) of the section, there is possibility that MPS is exceeded by 3 kmph due to tolerance of speed equipments and parallax error in reading by the LP. Such cases shall not invite any disciplinary action against the Loco Pilots. (Ref: Executive Director, Stds (MP), RDSO letter no.SO.POL.124, Dt.12.09.2007).

6 MAXIMUM SPEED OF TRAINS:

Subject to all temporary and permanent speed restrictions and the maximum permissible sectional speed as laid down in the time table for the section concerned.

7 The maximum permissible speed and speed over loop lines of trains over facing points on the straight is shown against each station in the time table or in the foot notes.

The following outlines indicate broadly the speed over facing points.

a) A train carrying passenger can be received directly on a loop having 8 1/2 turnout with straight switches provided.

i) Running through of such train over the turn out is prohibited.

ii) Interlocking arrangements should be such that it must not be possible to take off the departure signals unless the reception signals for such line is / are first put back to on position.

iii) Necessary speed board indicating 10 KMPH is fixed on the same post of the Home signal.

iv) Location of such turn out and speed limit is shown in the Working Time Table and

v) Necessary provision permitting such reception is given in the Station Working Rules.

b) Speed over facing points when passing over the Main line :

i)	Non-Interlocked station		30 Kmph
ii)	Station Equipped with		
	Standard I	Signalling	50 Kmph
	Standard II	Signalling	75 Kmph
	Standard III	Signalling	Maximum Permissible speed
iii)	Station Equipped with		
	Standard I R	Signalling	50 Kmph
	Standard II R	Signalling	110 Kmph
	Standard III R	Signalling	140 Kmph
	Standard IV R	Signalling	160 Kmph

(As per IRSE Manual Part-I RB'S Letter No- 2003/SIG/SEM, Dt- 19.05.04)

Note : The actual speed over the facing points will be limited by the Track Condition.

8 Extra time allowed for temporary engineering restrictions are shown as C and for other unforeseen detention as RT. These allowances are indicated in the train timings column.

9 It will be readily realised by Drivers that slowness in starting trains represents a considerable loss of time, if the loss at each station is totalled up for the whole journey.

10 The Special attention of the staff is drawn to crossing of trains carrying passengers.

11 Single and Double lines are indicated on top of timings page along with system of working.

12 In case of late running of trains, the trains can be allowed by reducing stipulated stoppage time at the stations.

AIR BRAKE TRAINS DISABLED ENROUTE, ROLLINGDOWN IN GRADIENTS - INSTRUCTIONS TO RUNNING STAFF.

Drivers of air brake trains should take the following action, when the train (passenger or freight) get stranded in mid-section on account of loco failure or any other reason: -

i) Apply brakes on locomotives and train by moving Driver's brake valve handle to emergency application position (mere application of loco brakes is **NOT ADEQUATE**).

ii) Apply hand brakes on the locomotives.

iii) Physically check if brake application has actually taken place.

iv) Also apply locomotives independent brakes on the banking locomotives, if the train is banked.

If the detention is likely to be more than 30 mts. The Guard and the Drivers should then apply

wooden wedges and Guard's hand brake to avoid rolling down of the train.
